

Parts Pick List

The new CDA Pick List works in conjunction with our Parts Request Dashboard. Both of these systems are designed to reduce labor cost, as well as reducing errors in shipping Parts.

Every remote inventory is assigned its own unique Pick List which allows each of those locations to see all parts that have been requested to be fulfilled for that day, or parts that need to be processed in general. Parts personnel in the warehouse can quickly pull and scan parts in a matter of seconds, which translates into reduced labor cost throughout the day.

Employees have the ability to print the full pick list, so they can quickly retrieve each part. The pick list can be sorted by "Part Location", to streamline the picking process. Lastly, you have the ability to print shipping labels.

Highlights

- Every remote location has the ability to control a Parts "Pick List" for fulfilling a request.
- Quickly get a PDF 8.5 x 11 printout, so employees can retrieve parts from shelf locations, or anywhere else parts are located.
- Efficiently process each Part by scanning the Part label (UPC / QC coding scanning).
- If the technician is a remote tech for "drop-ship," the system will generate a label to be printed for Part shipping. Otherwise, the Part will be flagged as "Hold for Pickup."
- The technician is required to scan "only" each Part as they are received (no manual input).
- At a glance, view of when the technician received the Part(s) or is still waiting for Part (in transit).
