

Desktop & Mobile Credit Card Processing

CDA Software v.10 has built-in support for real-time secure credit card processing both in the desktop application, and our mobile application.

To get started, all you need is a Stripe account (*to-date this is the only payment gateway we support*). Once you've created your Stripe account, you will generate a free Stripe API Key. This API Key will be shared with us so we can process secure credit card transactions on your behalf.

Since all we need is an API Key to process credit cards for you, no CDA employee will ever need access to your Stripe account, or any other financial details within Stripe.

When CDA successfully captures a credit card payment, we log the credit card type, payment amount, and the authorization number; we never store full credit card information.

Highlights

- Both Desktop and Mobile employees can process credit card payments.
- Mobile payments are updated to a Claim in real-time, for front office review.
- Desktop payments are updated to a Claim in real-time, for mobile technician review as well.
- Credit card payments can also be used with CDA Pidgins.
- We never store full credit card information.
- CDA Software uses Stripe as its payment gateway. Stripe pricing can be found here: <https://stripe.com/pricing>
- Stripe is a PCI Level 1 Service Provider
- CDA Software only needs/uses the unique Stripe API Key from your company to process credit card payments. No CDA employee will ever have access to your Stripe account.
