## AHS - American Home Shield

CDA Software v.10 includes Realtime Integration (RTI), with Service Bench, Service Power and NSA. We also support American Home Shield.

Why RTI? Doing double-entry for data inputting is no longer an option for most businesses today. With the rising cost of labor and parts, your business needs to remain as lean as possible. CDA Software RTI Integration gives you that competitive edge.

If you handle service dispatches for Dispatch.me we have you covered. All critical information you make within your CDA claim is automatically updated to Dispatch.me. When you update your notes in CDA, they are automatically synced to Dispatch.me.

Highlights

• AHS dispatches can come over with more than the traditional one item per dispatch. Instead, an AHS dispatch will have multiple items at a time. In CDA, once the dispatch is imported, we flag the front & center of the Work Order, as well as the count of items that came over on the dispatch. The full list of items is available at the top of the comments section on the Work Order.

• Import dispatches directly into CDA from AHS.

• Keep dispatches up to date using CDA; no need to do status updates on AHS.

• When you schedule a call, AHS will be updated with the Schedule date automatically.

• Add notes that can be updated to AHS.

• Realtime, no need to wait for syncing.
